In Progress

“Satisfaction in the End without End.” There are two prominent conceptions of the human future in the Christian tradition: the progression thesis, which envisions ever greater goods to be attained, and the highest good thesis, which envisions a single highest attainable good. This essay defends the progression thesis against objections that allege that a future of the sort the progression thesis posits would be inadequate or unsatisfying.

“That State Than Which No Greater Can Be Conceived” (working title). This essay considers a static vs. a dynamic conception of heaven, makes a theological case for the latter, and defends it against philosophical objections.

“God’s Toxin Puzzle and its Counterfactuals” (working title), a reply to Pittard’s “Evil and God’s Toxin Puzzle” that highlights the differences between ‘would,’ ‘might,’ and ‘would probably’ counterfactuals and the significance of those differences for the decision-theoretic solution to the puzzle.

Unity and Persons: An Essay in Ontology (working title) is a book on composition and the ontology of persons. Part I argues that if oneness is an intrinsic feature of what bears it, then either unrestricted composition or mereological nihilism must be correct (though no compelling argument favors one over the other). With plausible assumptions, this disjunction implies that material objects do not gain or lose parts. It thus neatly avoids the Paradox of Increase. It also raises the question what (if anything) we humans might be. Part II defends the view that human persons are immaterial objects. Together with their transient bodies, they form medium-scale ecosystems. These anthroposomatic systems have a high degree of functional unity, but do not have ontological unity. Nonetheless, states of affairs involving them are bearers of value. As a bonus, the view allows a resolution of the otherwise troublesome Problem of the Many.

Research Interests

I have broad interests in metaphysics, but my chief interests lie in three areas:

- *Ontology*. I am interested in a collection of interrelated questions about identity, material (and other) composition, time and persistence through it, causation, and vagueness, among other things. I am also interested in the ontology of abstract objects like propositions, properties, and possible and (I'd say) impossible worlds.
- *Metaphysical issues in philosophical theology*, especially issues about divine agency, as in theories of providence (e.g., Molinism and its ongoing debate with "open theism"), conservation (see above), and creation (e.g., whether abstracta are created, so that one necessary existent may depend on another).
- *The borderland of metaphysics and logic*, especially where it overlaps the areas mentioned above. This includes modal and counterfactual logic (and the metaphysical questions they raise, such as those about the nature of possible worlds and the grounding of counterfactuals of freedom), many-valued logic, relative identity, and the like.
